CLW Benefits

Ensure Lone Worker Safety

CLW monitors people by sending messages to their radio or phone - if a person can't reply for any reason - CLW will immediately notify support staff and ensure that action is taken. With ZONITH Centralised Lone Worker, CLW, people are assured that their safety is been monitored even if their radio or mobile phone fails or is out of coverage.

Significant Cost Saving

CLW can simultaneously support TETRA, MOTO-TRBO DMR, MPT1327 and mobile phones. A single centralised installation will automatically activate and deactivate Lone Worker services across your entire work force day or night - working when you need it most and eliminating recurring charges.

Intelligent Lone Worker Solution

CLW can be automatically activated based on the time of day or your location within a building. CLW works in conjunction with ZONITH indoor positioning to create Safe Areas. When a person exits a Safe Area - CLW automatically activates - when the person returns to the Safe Area the service will automatically cease.

Flexible and Scalable

CLW allows you to start small and helps you to develop your Lone Worker policy - without the need to purchase additional hardware. The CLW Tool Kit allows people to create user profiles and ensures that your entire workforce is protected when they need it most.

System Architecture

CLW Features

Scheduler

CLW can be configured to automatically turn on/ off during the day or night. This feature can be configured for individuals or to support larger groups of Lone Workers.

Alive Check

CLW 'Alive Check' messages can be sent as often as you want. Lone Workers have a fixed amount of time in which to respond - if they fail to respond an alarm is immediately raised to the support staff.

Retry Option

Lone Workers need flexibility and can't always respond even when safe. The 'Retry' feature gives users the option to wait for the next 'Alive Check' without triggering an alarm.

Lone Worker Security

CLW messages can be defined and easily changed by the administrator - guaranteeing that only the right people are responding - if an incorrect message is returned an alarm is immediately raised.

Alarm Escalation

In the event that a Lone Worker fails to respond to an 'Alive Check' message CLW will automatically escalate the alarm notification until to ensure that action is taken.

Administrator Access

CLW is a password protected software application installed on a single central computer accessible using any connected web browser.
